

Bystander Effect Agent Based Model

Megan Church

What is the Bystander Effect?

Diffusion of Responsibility  More People = Less Help

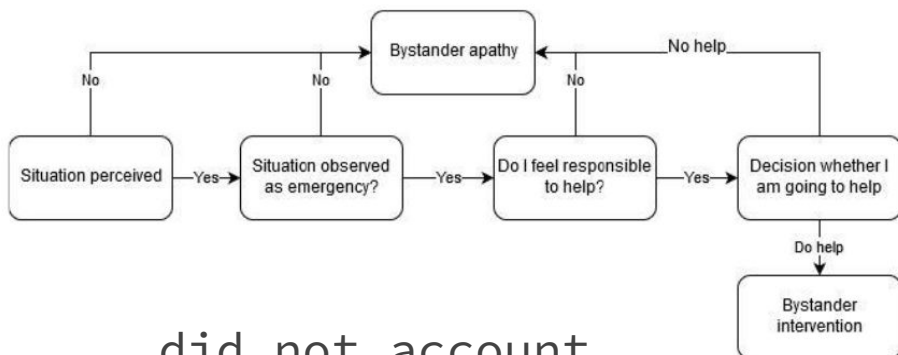

Agent Based Model Approach

— — —

Social Relations and Presence of Others Predict Bystander Intervention: Evidence from Violent Incidents Captured on CCTV

Environment

Density

- high
- low

Location

- inside bar
- outside bar
- public street
- station
- shop/restaurant

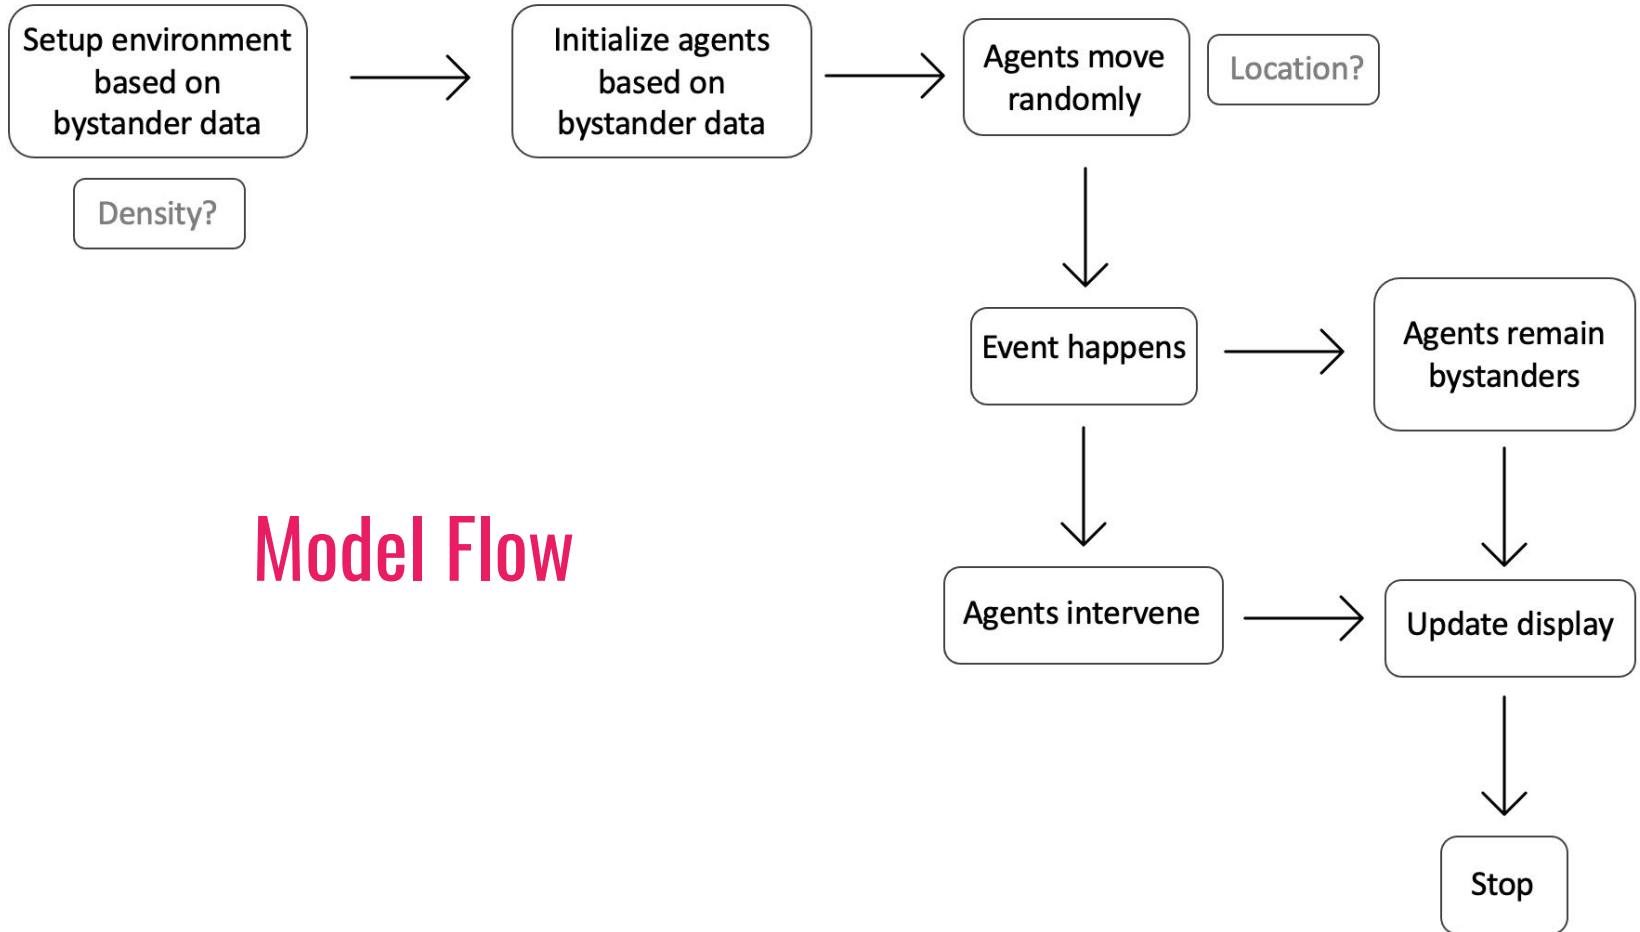

Agents

Interveners

- gender/occupation
- proximity
- relationship
- action
 - escalatory
 - de-escalatory

Bystanders

- N/A

Model Flow

number-of-bystanders

1	2
3	12

Display and Outputs

-----Intervener Data-----

De-Escalatory

- open gestures
- non-forceful touching
- blocking
- holding back
- hauling off
- pushing apart

Escalatory

- threatening gestures
- pointing
- throwing
- pushing
- shoving
- hitting
- kicking
- weapon

Proximity

when event happens

Example Run

— — —

number-of-bystanders
26b

setup

go

total interveners
16

percent interveners
61.54

snapshot

-----Environment-----

density
low

location
outside bar

day
sunday

time
3:45 am

-----Intervener Data-----

percent bouncers
0

percent female
18.75

percent male
81.25

knows party
13

close proximity to event
9

de-escalatory

escalatory

both

none

Model Performance

Performs as expected

More People = Less Help

Conclusions

— — —

Spatial Distribution

low density

high density

both displays have 12 bystanders

No Bystander Data

Limits prediction
